

PAVING THE WAY TOWARDS CLEAN ENERGY AND FUELS IN EUROPE

Talks with research, industry and EU Member States
on bioenergy, advanced biofuels and renewable fuels

WEDNESDAY 29TH MAY 2019 | 09:00 - 17:15
CONGRESS CENTER CCL LISBON

Organised in the framework of 27th EUBCE
European Biomass Conference and Exhibition

ADVANCED BIOFUELS

RENEWABLE FUELS

INTERMEDIATE BIOENERGY CARRIERS

COMBINED HEAT AND POWER

MEMBER STATES, STAKEHOLDERS AND FINANCING

An initiative of the

In collaboration with

SET Plan Action 8
EU Member States

Paving the way towards clean energy and fuels in Europe

*Talks with research, industry and EU Member States
on bioenergy, advanced biofuels and renewable fuels*

*Wednesday 29 May 9.00 - 17.15 - Congress Centre CCL Lisbon
In the framework of the 27th EUBCE European Biomass Conference and Exhibition*

Organized by:

European Commission Directorate-General Research and Innovation
in collaboration with

The SET Plan - Action 8 EU Member States, the European Technology and Innovation Platform
Bioenergy, the Renewable Heating and Cooling Platform and the European Energy Research
Alliance Bioenergy

This research policy workshop will focus on how to move forward the innovation chain in the EU for bioenergy, advanced biofuels and renewable fuels, contributing to the clean energy transformation in energy and transport, in line with the Strategic Development Goals and the EU Communication “Clean Planet for All”. For this purpose, the workshop will identify the research and innovation needs, the strategy and the roadmap for bioenergy, biofuels and renewable fuels to make the European industrial energy and transport sectors economically and environmentally sustainable, secure and competitive in the global markets.

The agenda will focus on the value chains of advanced biofuels, renewable fuels, intermediate bioenergy carriers and biomass-based cogeneration of heat and power. The entire innovation sequence will be discussed, from breakthrough technologies to applied research and demonstration, pre-commercial scale financing and market up-take support measures. Results from the entire portfolio of around 60 projects supported under the European Union's Framework Programme Horizon 2020 - *Secure, clean and efficient energy* challenge will feed into the discussion. The views of the engaged EU Member States and of research and industrial stakeholders will be an important additional contribution, to identify non-technological support pathways through new tools, research concepts, the mobilization of national actions, private engagement and financing mechanisms.

The workshop will then report on the progress of the innovation chains, the effectiveness of pushing innovative solutions into the market and their broader penetration into the energy and transport mix. Policy recommendations based on project results, the Member States' interests and plans, as well as the views of the stakeholders, will also be collected and reported.

The detailed agenda will be available soon.

The event will be free of charge upon registration.
